SUMMARY

Software engineer with 4 years of experience specializing in React and TypeScript, owning features end-to-end, from frontend architecture and backend development to mobile delivery and production deployment. Led frontend development for teams of up to 6 engineers, mentored developers through code reviews and technical guidance, and partnered directly with clients to ship production software under tight deadlines.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, Redux Toolkit, React Query, React Hooks, Jest, HTML/CSS, Mantine, Tailwind, Bootstrap
Databases: Firestore, MongoDB, PostgreSQL
Backend: NestJS, Java Spring Boot, Jest
DevOps: Git, GitLab, GitHub, CI/CD, Docker
Others: REST APIs, Vite, WebSockets, Monorepo, Figma, Scrum, Agile, AI-assisted Development
Mobile: Capacitor

EXPERIENCE

Software Engineer - nQode Software Company | Serbia 04/2024 - 05/2026 (2 years 2 months)

nQode is a Serbia-based software company working with international clients. Worked with a Dutch clean-tech startup, contributing to an energy management platform as a Frontend Engineer, later expanding to full-stack.

Technologies: React, TypeScript, NestJS, Next.js, Redux Toolkit, React Query, React Hooks, Recharts, Tailwind, Mantine, Firestore, Capacitor, Docker, Jest, GitLab, CI/CD, Claude Code, Scrum, Agile

- Established frontend architecture from scratch for a team of up to 6 engineers, defining project structure and development standards, while mentoring engineers, performing code reviews and maintaining an 86% code quality score across the codebase
- Delivered end-to-end features across frontend (React/Next.js), mobile (Capacitor) and backend (NestJS), including real-time WebSocket-based IoT integrations and live dashboards with real-time charts, built in direct collaboration with the hardware engineering team; shipping to production under tight deadlines
- Proactively identified usability issues, edge cases and complex bugs, contributing improvements beyond assigned tasks, while collaborating with clients and product owners to refine requirements

Software Engineer - LittleBit IT Sourcing | Serbia 08/2022 - 03/2024 (1 year 7 months)

LittleBit is a Serbia-based software development company delivering solutions for international clients across multiple industries.

Technologies: React, TypeScript, Java Spring Boot, Redux Toolkit, React Hooks, MongoDB, Docker, GitHub, Scrum, Agile

- Designed and built a reusable component library and custom React hook system with Redux state management, providing patterns adopted across the engineering team and reducing per-feature development time
- Delivered full-stack features across legal-tech and finance domains, contributing to bug fixing and refactoring of a large legacy codebase
- Refactored and extended frontend functionality for a virtual meetings platform for OVII Technologies (US-based client), improving code structure and core user flows

Software Engineer internship (during studies) - VegaIT | Serbia 11/2021 - 12/2021

Developed a timesheet web application using Angular, Java Spring Boot, PostgreSQL and GitHub, while applying core concepts of REST APIs and client-server communication

EDUCATION

Bachelor with Honours in Electrical and Computer Engineering - Faculty of Technical Sciences, University of Novi Sad, Serbia (2017 - 2022)

LANGUAGES

English (professional working proficiency)

Serbian (native proficiency)
